We are able to connect these **knowledge fragments** in any way we want. There are no limits on how we use knowledge fragments...

...and thousands of times each day we link together knowledge fragments to form “correlations”

Here is a correlation you might use today...

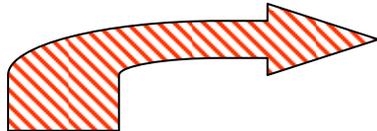

You're in a restaurant, having dinner,

You see a couple nearby – people you don't know...

You think to yourself...

And in the blink of an eye you say to your wife...

"Hey, my wife is friends with his wife Joanna..."

"Have you talked to Joanna recently?"

"Did she and Jake go to Bermuda?"

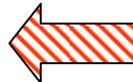

"That woman is wearing a red dress..."

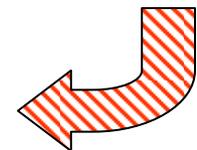

"My wife has a red dress like that..."

"My buddy Jake said he was going to Bermuda. I wonder if he went?"

"Last time she wore it was three years ago on vacation to Bermuda..."

Correlations guide us from thought to action.

Thought

Woman wears red dress

Red dress like wife's

Wife in Bermuda

Bermuda destination Jake

Jake married Joanna

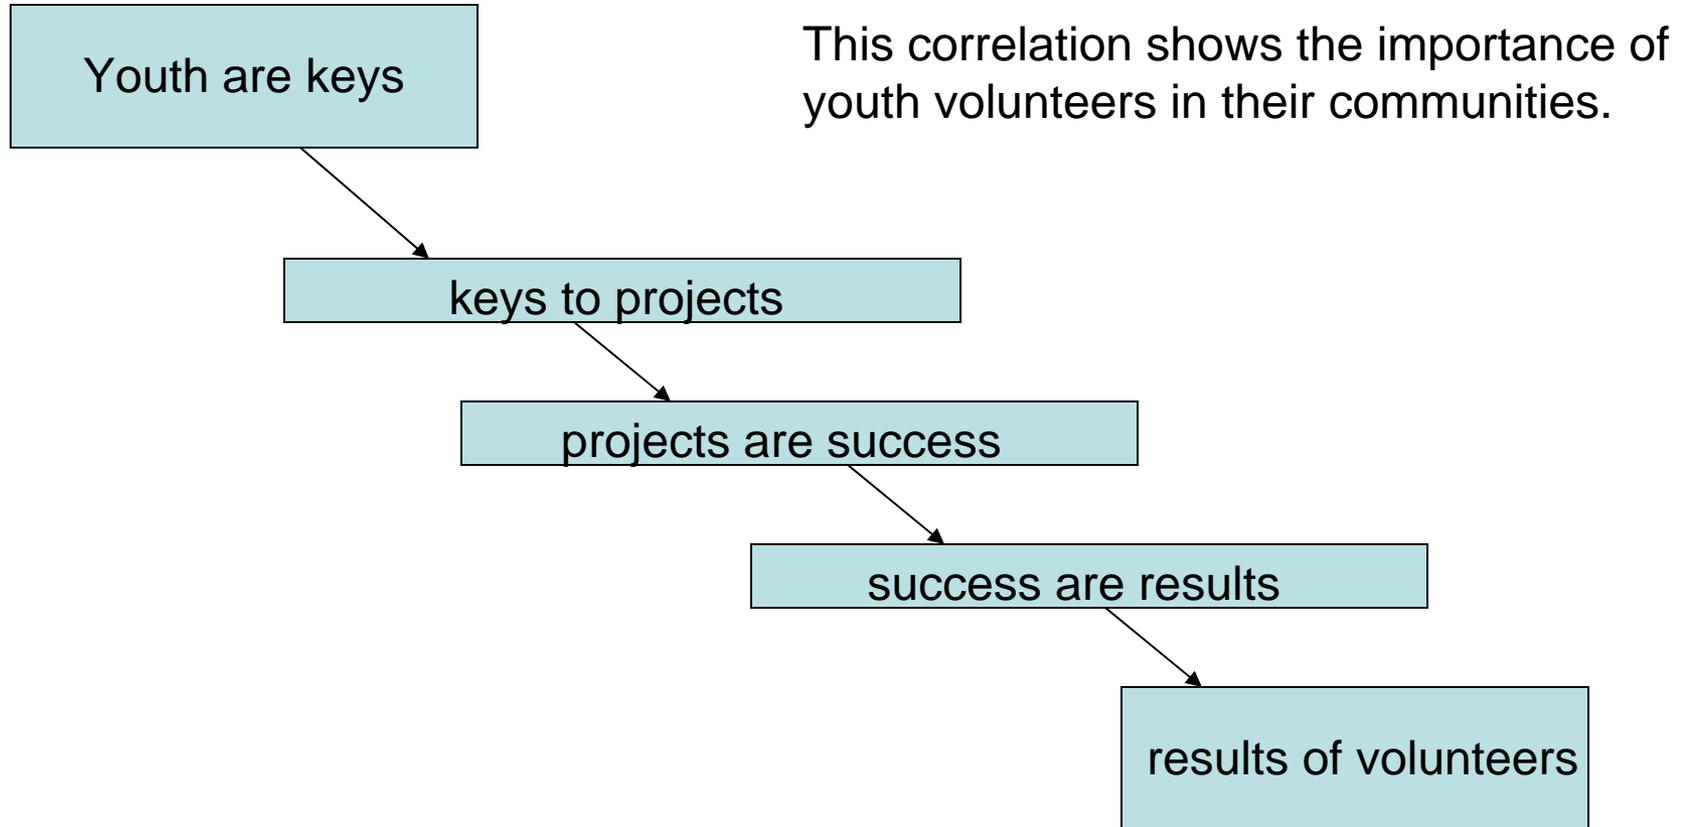

Joanna wife friend

“Have you talked to Joanna recently?”

Action

Just like natural correlations, Correlation Technology software builds connections between two concepts and shows you how they are related!

Based on actual Correlation Technology results from Wikipedia!

Why Correlation Technology?

Correlation Technology acts like a Big Huge Brain to help us store, recall and connect information in any way imaginable.

Correlation Technology can help us:

- solve complex problems by discovering connections
- show us the impact those connections have on our lives
- use the knowledge of that impact to make better decisions
- suggest potential outcomes of our decisions

In a world of almost limitless information,

Correlation Technology can help us:

- find the best answers to our questions
- manage information easily and automatically
